

HomeKonet — Full System Architecture

Django 5 + DRF + Channels backend ■ React 18 + Vite frontend ■ Docker Compose, single-host deployment ■ External managed Postgres (Neon)

Legend: Blue solid = client/edge tier. Green solid = Django application server. Orange solid = Celery background workers. Purple solid = standalone admin tooling (pgAdmin). Orange/red cylinders = external datastores (Postgres) and in-stack cache/broker (Redis). Dashed grey boxes = persistent Docker volumes / bind mounts. Bold blue arrows = primary client request path. Thin grey arrows = internal broker/cache traffic. Dashed red arrows = out-of-band / operator-only paths that bypass the normal request path (flagged where they carry security implications). Fine dotted grey arrows = volume/bind-mount attachments.
